

The `magicnum` package

Heiko Oberdiek
<oberdiek@uni-freiburg.de>

2009/04/10 v1.1

Abstract

This packages allows to access magic numbers by a hierarchical name system.

1 Documentation

1.1 Introduction

Especially since ε -TeX there are many integer values with special meanings, such as catcodes, group types, ... Package `etex`, enabled by options, defines macros in the user namespace for these values.

This package goes another approach for storing the names and values.

- If L^AT_EX is available, they are stored in Lua tables.
- Without L^AT_EX they are remembered using internal macros.

1.2 User interface

The integer values and names are organized in a hierarchical scheme of categories with the property names as leaves. Example: ε -TeX's `\currentgrouplevel` reports 2 for a group caused by `\hbox`. This package has chosen to organize the group types in a main category `etex` and its subcategory `grouptype`:

```
etex.grouptype.hbox = 2
```

The property name `hbox` in category `etex.grouptype` has value 2. Dots are used to separate components.

If you want to have the value, the access key is constructed by the category with all its components and the property name. For the opposite the value is used instead of the property name.

Values are always integers (including negative numbers).

1.2.1 `\magicnum`

`\magicnum {⟨access key⟩}`

Macro `\magicnum` expects an access key as argument and expands to the requested data. The macro is always expandable. In case of errors the expansion result is empty.

The same macro is also used for getting a property name. In this case the property name part in the access key is replaced by the value.

The catcodes of the resulting numbers and strings follow T_EX's tradition of `\string`, `\meaning`, ...: The space has catcode 10 (`tex.catcode.space`) and the other characters have catcode 12 (`tex.catcode.other`).

Examples:

```
\magicnum{etex.grouptype.hbox} ⇒ 2
\magicnum{tex.catcode.14} ⇒ comment
\magicnum{tex.catcode.undefined} ⇒ ∅
```

1.2.2 Properties

- The components of a category are either subcategories or key value pairs, but not both.
- The full specified property names are unique and thus has one integer value exactly.
- Also the values inside a category are unique. This condition is a prerequisite for the reverse mapping of `\magicnum`.
- All names start with a letter. Only letters or digits may follow.

1.3 Data

1.3.1 Category `tex.catcode`

<code>tex.catcode.escape</code>	0
<code>tex.catcode.begingroup</code>	1
<code>tex.catcode.endgroup</code>	2
<code>tex.catcode.math</code>	3
<code>tex.catcode.align</code>	4
<code>tex.catcode.eol</code>	5
<code>tex.catcode.parameter</code>	6
<code>tex.catcode.superscript</code>	7
<code>tex.catcode.subscript</code>	8
<code>tex.catcode.ignore</code>	9
<code>tex.catcode.space</code>	10
<code>tex.catcode.letter</code>	11
<code>tex.catcode.other</code>	12
<code>tex.catcode.active</code>	13
<code>tex.catcode.comment</code>	14
<code>tex.catcode.invalid</code>	15

1.3.2 Category `etex.grouptype`

<code>etex.grouptype.bottomlevel</code>	0
<code>etex.grouptype.simple</code>	1
<code>etex.grouptype.hbox</code>	2
<code>etex.grouptype.adjustedhbox</code>	3
<code>etex.grouptype.vbox</code>	4
<code>etex.grouptype.align</code>	5
<code>etex.grouptype.noalign</code>	6
<code>etex.grouptype.output</code>	8
<code>etex.grouptype.math</code>	9
<code>etex.grouptype.disc</code>	10
<code>etex.grouptype.insert</code>	11
<code>etex.grouptype.vcenter</code>	12
<code>etex.grouptype.mathchoice</code>	13
<code>etex.grouptype.semisimple</code>	14
<code>etex.grouptype.mathshift</code>	15
<code>etex.grouptype.mathleft</code>	16

1.3.3 Category etex.ifttype

etex.ifttype.none	0
etex.ifttype.char	1
etex.ifttype.cat	2
etex.ifttype.num	3
etex.ifttype.dim	4
etex.ifttype.odd	5
etex.ifttype.vmode	6
etex.ifttype.hmode	7
etex.ifttype.mmode	8
etex.ifttype.inner	9
etex.ifttype.void	10
etex.ifttype.hbox	11
etex.ifttype.vbox	12
etex.ifttype.x	13
etex.ifttype.eof	14
etex.ifttype.true	15
etex.ifttype.false	16
etex.ifttype.case	17
etex.ifttype.defined	18
etex.ifttype.csname	19
etex.ifttype.fontchar	20

1.3.4 Category etex.nodetype

etex.nodetype.none	-1
etex.nodetype.char	0
etex.nodetype.hlist	1
etex.nodetype.vlist	2
etex.nodetype.rule	3
etex.nodetype.ins	4
etex.nodetype.mark	5
etex.nodetype.adjust	6
etex.nodetype.ligature	7
etex.nodetype.disc	8
etex.nodetype.whatsit	9
etex.nodetype.math	10
etex.nodetype.glue	11
etex.nodetype.kern	12
etex.nodetype.penalty	13
etex.nodetype.unset	14
etex.nodetype.maths	15

1.3.5 Category etex.interactionmode

etex.interactionmode.batch	0
etex.interactionmode.nonstop	1
etex.interactionmode.scroll	2
etex.interactionmode.errorstop	3

1.3.6 Category luatex.pdfliteral.mode

luatex.pdfliteral.mode.setorigin	0
luatex.pdfliteral.mode.page	1
luatex.pdfliteral.mode.direct	2

2 Implementation

```
1 (*package)
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with L^AT_EX.

```

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/magicnum.dtx](http://ctan.org/ctan:macros/latex/contrib/oberdiek/magicnum.dtx) The source file.

[CTAN:macros/latex/contrib/oberdiek/magicnum.pdf](http://ctan.org/ctan:macros/latex/contrib/oberdiek/magicnum.pdf) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://ctan.org/ctan:install/macros/latex/contrib/oberdiek.tds.zip)

TDS refers to the standard “A Directory Structure for T_EX Files” ([CTAN:tds/tds.pdf](http://ctan.org/ctan:tds/tds.pdf)). Directories with `texmf` in their name are usually organized this way.

¹<http://ftp.ctan.org/tex-archive/>

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain-`TEX`:

```
tex magicnum.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>magicnum.sty</code>	→ <code>tex/generic/oberdiek/magicnum.sty</code>
<code>magicnum.lua</code>	→ <code>scripts/oberdiek/magicnum.lua</code>
<code>oberdiek.magicnum.lua</code>	→ <code>scripts/oberdiek/oberdiek.magicnum.lua</code>
<code>magicnum.pdf</code>	→ <code>doc/latex/oberdiek/magicnum.pdf</code>
<code>magicnum.txt</code>	→ <code>doc/latex/oberdiek/magicnum.txt</code>
<code>test/magicnum-test1.tex</code>	→ <code>doc/latex/oberdiek/test/magicnum-test1.tex</code>
<code>test/magicnum-test2.tex</code>	→ <code>doc/latex/oberdiek/test/magicnum-test2.tex</code>
<code>test/magicnum-test3.tex</code>	→ <code>doc/latex/oberdiek/test/magicnum-test3.tex</code>
<code>magicnum.dtx</code>	→ <code>source/latex/oberdiek/magicnum.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your `TEX` distribution (te`TEX`, mi`kTEX`, ...) relies on file name databases, you must refresh these. For example, te`TEX` users run `texhash` or `mktextlsr`.

4.5 Some details for the interested

Attached source. The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk magicnum.pdf unpack_files output .
```

Unpacking with L^AT_EX. The `.dtx` chooses its action depending on the format:

plain-`TEX`: Run `docstrip` and extract the files.

L^AT_EX: Generate the documentation.

If you insist on using L^AT_EX for `docstrip` (really, `docstrip` does not need L^AT_EX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{magicnum.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex magicnum.dtx
makeindex -s gind.ist magicnum.idx
pdflatex magicnum.dtx
makeindex -s gind.ist magicnum.idx
pdflatex magicnum.dtx
```

5 History

[2007/12/12 v1.0]

- First public version.

[2009/04/10 v1.1]

- Adaptation to L^AT_EX 0.40.

6 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
